

Oklo deposit in Gabon: The role of bitumen

V.L. VINOGRAD¹

¹Institute of Geosciences, Goethe University, Frankfurt, Germany (v.vinograd@fz-juelich.de)

The presentation will review available isotope evidence of nuclear fission at the uranium ore deposit Oklo and on neutronic parameters of the Oklo reactors. The currently accepted hypothesis of water moderation will be questioned. The role of bitumen in controlling the low-grade ore deposition, the ore enrichment and the sustained criticality will be discussed.
